

External Battery Enhancement

Capacitech's drop-in power cord both stores and distributes power, complementing batteries in cleantech applications.

How we help:

Batteries are optimized to provide energy over long periods of time. The short bursts of power that are common to cleantech applications can damage them, leading to costly replacements.

 **6x** Higher peak power capacity

Capacitech improves the system's internal resistance, resulting in higher peak power capacity.

 **50%** Longer battery operating life

Capacitech takes over when loads draw a surge of power, protecting the batteries, resulting in a longer operating life.

 **30%** Return on investment

Capacitech reduces the OpEx of batteries, resulting in a 30% return on investment.
